

Senior Accounting Specialist

Roxom · Hybrid · Full-time

The Role

At Roxom, we're building out our Finance & Accounting team. You'll own the accounting workstream — monthly close, reconciliations, AP, and expense processing — working directly with the Accounting Manager in a small, automation-first team.

We're looking for someone who owns their workstream end-to-end — proactive, precise, and self-driven. You flag issues before they become problems and drive tasks to completion without needing follow-up.

We're in the process of building our own internal accounting system. Things aren't always plug-and-play — we need someone who's comfortable with that and willing to roll up their sleeves when needed.

Roxom operates more like a startup than a corporate. We're still building our processes — and we're building them to fit how we actually work, not the other way around. That means less bureaucracy, more ownership, and a lot of direct collaboration across every area of the business. We work best with people who are energized by that kind of environment — where things are still taking shape and there's real room to contribute beyond a job description.

What You'll Do

- Own the monthly close process across multiple group entities, ensuring accuracy and timeliness in a multi-entity, multi-currency environment.
- Run and supervise automated accounting workflows — we use AI tools (Claude) and SQL-based pipelines as a core part of how the team operates.
- Manage three-way reconciliations across operational data, bank statements, and the general ledger — investigate discrepancies and resolve them.
- Handle intercompany reconciliations and cross-entity allocations across the group.
- Handle accounts payable and corporate card expense processing across entities, including budget tracking and flagging out-of-policy spend.
- Coordinate with internal teams (Ops, Treasury, Tech) to ensure data is available and accurate for close.
- Contribute to process documentation and ongoing automation initiatives — identify manual processes and help fix them.
- Adapt quickly as the business evolves: products change, processes change, and you'll need to change with them.

What We're Looking For

- 4–6 years in accounting or finance operations — you've owned a month-end close, not just supported one.
- Advanced Google Sheets.
- Comfortable working with SQL and AI tools (Claude or similar) to query data, build reports, and support your own workflow. You don't need to be a developer — but you can't be afraid of the tools.
- Adaptable to non-standard tools and workflows — experience with traditional ERP systems is fine, but we need someone who can move beyond them and contribute to building something new.
- Experience with multi-entity or multi-currency operations.
- Ownership mindset — you drive tasks to completion, flag problems early, and come with solutions, not just questions.
- English proficiency required.
- IFRS knowledge — you understand the fundamentals
- Fintech or crypto experience is a plus.
